<b>Reference</b>	ISBN 978-84-393-7887-7

## Aim

To develop process indicators and outcomes on colon and rectal cancer and breast cancer.

## Conclusions and results

Its application in an external assessment system will give participants access to all basal and common data.

## Recommendations

Generalization and indicators' application and assessment of the whole State Communities.

## Methods

The strategy rests on two fundamental pillars: a) search of contrasted scientific evidence and b) expert consensus. Regarding the first, we contrasted clinical practice guides of relevant institutions, both national and international. Regarding the second, we relied on experts from scientific societies, evaluation agencies, and health services. Work methods are based on consensus.
