Aim

To determine the safety and effectiveness of VIRUSOLVE™ as an antimicrobial cleaner and disinfectant against bacteria, bacterial spores, fungi, and viruses.

Conclusions and results

The evidence retrieved is of low grade as the studies were only experimental. Evidence showed that VIRUSOLVE™ is applicable as a low-level disinfectant, but its application in critical and semicritical areas would require higher-level evidence of safety and effectiveness – especially to support claims that it is highly effective as a cleaner and terminal disinfectant against bacteria, fungi, and viruses and designed to eliminate the risk of cross-infection from viruses, fungi, and bacteria.

Recommendation

Based on the retrievable evidence, VIRUSOLVE™ is recommended to be used only as a low-level disinfectant. For high-level applications, further research is necessary to better define the role of VIRUSOLVE™ as a highly effective cleaner and terminal disinfectant against bacteria, fungi, and viruses.
